Ongoing works

Humanoid: 1) Humanoid VLA with active search & spatial memory: develops a spatial-memory-augmented humanoid VLA for loco-manipulation under partial observability, enabling persistent object-centric scene memory and active re-localization of task-relevant targets beyond the current field of view. 2) Physics-aware real-to-simulation for humanoid loco-manipulation, Task-relevant partial motion retargeting from human videos, Agentic-learning for safe whole-body loco-manipulation.

Dexterous Hand & Foundation Models: Guidance-driven dexterous hand manipulation, Aerial dexterous hand manipulation, Blind dexterous hand manipulation using tactile and contact sensing, In-context vision-language-action model via human demonstrations, Physics-aware robot manipulation data generation via video diffusion models.
